

CordLife's Successful Cases

康盛人生的成功案例

Transplant with cord blood stem cells: 脐带血干细胞移植：

Little Ryan was suffering from leukaemia at a tender age of three. Despite a nation-wide search for bone marrow stem cells, a suitable donor could not be found. Fortunately, baby sister of Ryan, Rachel was born during that critical period which enabled the family to store Rachel's cord blood with CordLife, for Ryan's transplant. Now 10, Ryan is in school and his leukaemia is in remission.

“We were elated when Rachel's blood was shown to be a 100-per-cent match for Ryan. The healthy cells from his sister re-populated in his bone marrow and revived his immune system,” said Dr Tan Ah Moy, Head and Senior Consultant for Haematology and Oncology Services at the KK Women's and Children's Hospital where the transplant was performed.

小小Ryan在3歲時已證實患上白血病。雖然已在全國搜尋合適骨髓，惜遍尋不獲。幸好這時，Ryan的妹妹——Rachel出世了。Ryan父母馬上找康盛人生替Rachel保留脐帶血為Ryan作移植。現在Ryan 10歲了，可以如常上學，白血病亦已完全痊癒。

負責移植手術的新加坡竹脚婦幼醫院血液及腫瘤科主任及高級顧問醫生Dr Tan Ah Moy表示：「很高興 Rachel的脐帶血跟Ryan 100%融合。妹妹健康的細胞移植到Ryan的骨髓後，成功幫助Ryan建立自己的免疫系統。」

Cellular Therapy:

細胞治療：

An accident at birth 2.5 years ago deprived Baby Georgia of oxygen to her brain, resulted in cerebral palsy. The damage to the toddler's brain caused her to move involuntarily, suffer from muscle spasms and have up to 50 seizures a day. It was only after CordLife put the family in touch with a renowned neurosurgeon that enabled Georgia to be infused with her own cord blood, also stored by CordLife. Her conditions have improved since then.

“Georgia has made good progress since her stem cell infusion. She has better visual focus and eye contact with adults during play. She has more vocalization and tries to ‘sing-a-long’ by making different sounds to nursery rhymes. Georgia has improved postural and head control and is observed to be reaching more with her arms,” said Ms. Jaclyn Tan, Consultant Occupational Therapist at OzWorks Therapy.

兩年半前，因為出生時出現意外，令小小Georgia腦部缺氧，導致腦麻痺。腦部損傷令小孩長大學行的時候不能自主活動，出現肌肉肉攣，病發次數多達每天50次。幸好Georgia的父母早為孩子在康盛人生儲存了臍帶血。康盛人生為Georgia找到一位知名的腦科醫生並順利進行移植。現在Georgia情況已日漸好轉。

OzWorks Therapy職業治療師Jaclyn Tan表示：「Georgia在接受幹細胞移植後的康復情況十分理想。現在跟大人玩遊戲的時候視力更能集中，有更多的眼神交流；發聲表現有進步，會嘗試跟著兒歌發出不同音調；在控制身體和頭部活動方面亦較之前理想。在觀察期間，Georgia比以前更多嘗試伸手取物。」
